

RAV-Ware™ 1.9.7

ClearOne announces the release of new firmware on the RAV 600/900 product line. Coinciding with the firmware release is revision 1.9.7 of RAV-Ware, which incorporates the new functionality. The primary enhancements to the identified products include:

Addition of a RAV Wired Product SKU

ClearOne has developed a product SKU within the RAV product line that offers a Wired Tabletop Controller as part of the system. For configuration and programming ease, these devices have been added to the RAV-Ware Software application.

Regulatory Compliance for APAC, Latin America, and South Africa

Country-specific modifications to the telephone interface have been made based upon regulatory requirements. This does not affect existing configurations of the product.

Removal of Windows 98 USB Drivers

RAV-Ware will no longer support Windows 98 USB drivers.

JAVA 1.5.0 Interoperability

Corrected a problem with Web Pages being displayed improperly when a PC was using Sun's latest release of Java 1.5.0.
