

Engage every student while collecting actionable assessments

Student Response Systems, also known as clickers, collect student answers and scores each response in real time, enabling teachers to conduct ongoing, actionable formative assessment. Since responses are immediately tabulated, charted and displayed, teachers can use the data to deliver student-driven lessons, form the basis for further discussion, and evaluate mastery of student content. Teachers can more easily identify concepts that are difficult to grasp and provide a way to validate student learning.

Another benefit of Student Response Systems is that every student is engaged in the learning process and is an active participant, even students who do not regularly participate in classroom discussions. Teachers can even create teams for challenge assessments that foster healthy competition in the classroom.

RM iRespond Lite

The RM iRespond Lite is a feature-rich student response system that provides two-way RF interactive communication. This unit features a two-line display that allows you to send scores, averages, messages and feedback to your students. The RM iRespond Lite supports paper-based, oral and projected tests, and includes a “first responder” option to foster classroom excitement and competition. Teachers can remotely send prepared questions or create questions on the fly using the remote. Question types supported include: multiple choice, true/false, yes/no, multiple response, numeric fill-in-the-blank.

RM iRespond UltraLite

This response device was designed to meet the budget constraints many educators face. The UltraLite gives you the speed and reliability of RF technology and is the most cost-effective product on the market. This small, yet versatile and powerful unit enables standards-based assessment using a variety of question types: multiple choice, true/false, yes/no. Students log in using a unique PIN, which means attendance is taken as students log in.
